

Otono'Swim

H2O2 CONSULTING

The Otono'Swim range was created to treat the swimming-pools of the individuals. A combined use of the UV and the electrolyse disinfects your swimming-pools naturally and safely.

For who ?

Individuals who want to disinfect and treat their swimming-pool waters naturally.

Why ?

- To ensure a cleaner and fresher water respecting your skin and eyes,
- Clearer water,
- Natural treatment with no added chlorine and rainwater reusing,
- Long-term water savings,
- 100% Naturally treated with no added chemicals.

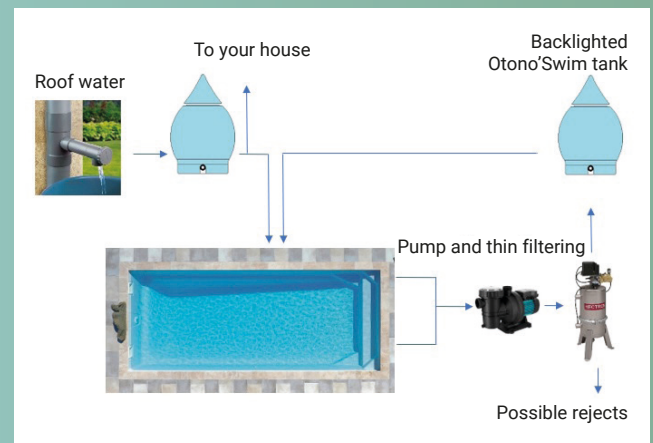

How ?

A combiated use of the UV and the electrolyse disinfects waters naturally and safely.

GOOD TO KNOW

HYGIENE : When sweat and urine melt with chlorine, water from swimming-pools or jaccuzis may become toxic. The risk to develop diseases like asthma or urinary bladder cancers is then more important.

THE CONCEPT

THE RULES

Cleaned water with no-added chemicals could be rejected in the rainwater networks during swimming-pool drains. Chlorine treatment must be stopped 15 days before draining. Pouring toxic products in the wilderness constitutes an offence to the L.211-2 article of the Environment Code.
